

Data Security Overview

Smart. Simple. Seamless. **AND SECURE.**

The Future of Student Relationship Management.

Flight Controls: How ApolloSRM Secures PII

- Multi-tenant SIS on AWS; prod/stage/dev isolated by account and VPC.
- Private subnets for app/data tiers; least-privilege Security Groups and NACLs.
- ALB/CloudFront at the edge; AWS WAF and Shield in front.
- TLS 1.2+ on all endpoints with HSTS.

ApolloSRM Shield: Cloud-Native PII Defense

- PII encrypted at rest with AES-256 (SSE-KMS); in transit with TLS 1.2+.
- KMS key rotation and strict key policies.
- Secrets in AWS Secrets Manager/Parameter Store; no secrets in code/images.
- S3 Block Public Access; object lock for critical logs/backups.
- Federated SSO with MFA for admins; no long-lived access keys.
- Least-privilege IAM roles; application RBAC with audit trails.
- Secure SDLC: code review, SAST/DAST, dependency and image scanning.
- OWASP Top 10 controls: validation, output encoding, CSRF, CSP, rate limiting.

Ground Control to Data Integrity: ApolloSRM Security

- Centralized logging with immutable S3 retention.
- 24x7 alerting with runbooks and on-call escalation.
- Backups: daily encrypted snapshots; RDS point-in-time recovery; Multi-AZ.
- Targets: RTO $\leq$ 4h, RPO $\leq$ 15m; 30–90-day retention with vault lock.
- Privacy/compliance: FERPA-ready, SOC 2-aligned; GDPR/CCPA via DPA/SCCs.
- Data minimization; tenant-level deletion on request/termination.
- Subprocessors disclosed; payment cards handled only by PCI processor.
- Incident response: triage $\rightarrow$ containment $\rightarrow$ eradication $\rightarrow$ recovery $\rightarrow$ post-mortem.
- Customer notification without undue delay; within 72h if reportable..

Ready for Launch?

Take one small step for your institution and one giant leap for student success with ApolloSRM. Let's ignite your institutional potential together!
